

The three cerebellar peduncles are:

1. Superior cerebellar peduncle:
 - * Input: Ventral spinocerebellar tract, tectocerebellar fibers.
 - * Output: Cerebellar efferent fibers, fibers to the ventral lateral thalamic nucleus (via
2. Middle cerebellar peduncle:
 - * Input: Fibers from the contralateral pontine nuclei.
 - * Output: Fibers to the contralateral pontine nuclei.
3. Inferior cerebellar peduncle:
 - * Input: Olivo-cerebellar fibers, dorsal spinocerebellar fibers, vestibulocerebellar fibers
 - * Output: Cerebellar efferent fibers, fibers to the vestibular nuclei, fibers to the retic

Question: What are the three cerebellar nuclei and their inputs/outputs?

Answer:

The three cerebellar nuclei are:

1. Fastigial nucleus:
 - * Input: Cerebellar cortex, vestibular nuclei, and the cortex of the archicerebellum.
 - * Output: The contralateral ventral lateral (vl) nucleus of the thalamus, the spinal cord
2. Interposed nucleus:
 - * Input: Cerebellar cortex, the contralateral red nucleus, and the posterior division of
 - * Output: The contralateral red nucleus, and the posterior division of the contralateral
3. Dentate nucleus:
 - * Input: Cerebellar cortex, the contralateral ventral lateral (vl) thalamic nucleus, and
 - * Output: The contralateral ventral lateral (vl) thalamic nucleus, the dentatorubral path

Question: What are the main inputs to the cerebellum?

Answer:

The main inputs to the cerebellum are:

1. Afferent fibers from the cerebral cortex, brainstem reticular nuclei, dorsal column nuclei,
